

2013 Hurricane Frequencies By Hugh Stegman NV6H

Superstorm Sandy created a situation in which the cell phone network was insufficient for emergency communication. While Twitter is often the best source of information in natural disasters, there will always be a place for radio. In fact, several recent exercises have been designed as "radio only."

Unfortunately, the demise of the U.S. National Communications System (now a different agency under DHS) has thrown a lot of things into doubt. It was widely believed that SHARES was dead, but it activated for the attack in Boston.

Any full rewrite of this list is on hold until this NCS situation sorts itself out.

Amateur frequencies are advisory only, as they move around or don't activate at all. Check ARRL bulletins for active nets.

COTHEN is a US Federal radio system designed for Customs and drug enforcement, but it is now also heavily used by the Coast Guard. ALE callups frequently lead to voice comms.

All days and times are UTC.

Submit corrections/additions to utilityworld@ominous-valve.com.

All SHARES frequencies are subject to change or disappearance without notice, due to the transition of NCS to a DHS asset.

- 4458.0 / 5778.5 Region 6 night net (Tu 0100)
- 4458.0 Region 4 night net (Wed 0100)
